

New Headset for Offices, Depots & Pick-by-Voice Systems

As a manufacturer of professional audio equipment we always listen carefully to our customer's feedback. That's why we developed in the past months a whole new headset for logistic and office environments.

We present a lightweight over-the-head headset with an easy to bend microphone boom and a total weight of just 50 grams. It has the same characteristics as our BATSTAR Comfort-Headset for the industry. It's build out of high quality materials, has an excellent noise cancelling microphone and is easy to assemble and disassemble following the BATSTAR „Easy-Repair“ system.

Overhead Lightweight-Headset

The lightweight headband can be adjusted in different steps to provide a comfortable use for multiple users. The soft sponge pad makes wearing the headset more comfortable and can be easily replaced anytime.

A water protected noise cancelling microphone provides high quality voice transmission. It is suitable for operating temperatures from - 40 °C up to +80 °C. The foam of the microphone can be replaced very easily for hygienic purposes.

Due to the „Easy-Repair“ principle, the headset can be disassembled quickly, so broken parts can individually get exchanged. This system saves money and time! It has proven itself in many logistic companies over the years!

The microphone boom allows a 280° rotation for a use on left or right ear. It can be adjusted with one hand while wearing it. Due to the durable design, it can be used in e.g. warehouses and industrial businesses.
